Vice President, General Manager  
Burns & McDonnell  
Healthcare & Research Facilities Group

## Healthcare Facilities: Keeping Pace

As the pace of research, innovation and technology increases the complexity of our lives, no industry is affected more than healthcare. Competition among providers, better-informed consumers and increasing construction costs increase the design team's challenge. To be successful, today's healthcare facilities must address all of these issues.

Above all, facilities must be flexible and able to adapt to constant change. Their design must be reliable, functional, sustainable and energy efficient. This degree of difficulty makes it imperative that owners select a team with broad experience and expertise.

Burns & McDonnell's full-service team of architects, engineers, interior designers and consultants provide a range of services not available with any other firm. At Burns & McDonnell, we have the ability to make a difference in the way patients are treated and how they heal. We create environments that are safe, non-threatening and a place to feel healthy.

Our approach is to understand our client's mission and become a valued member of the project team. We want to take the lead in providing solutions that have real value and that support our clients' objectives.

Turn to our story on page 9 to discover how we are taking that lead.
