

Rick Halil  
Senior Vice President  
Energy

## Innovative Energy Solutions

Coal remains one of the most abundant energy sources in the world, and it's up to us to provide the most advanced technologies to cleanly generate electricity using that resource.

Whether you're grappling with stringent environmental regulations or seeking more cost-effective methods to provide clean energy as discussed on Page 9 of this issue, Burns & McDonnell has the experience to develop a natural process for treating your coal plant waste stream.

As a company with diverse business lines, we have the opportunity to apply technologies from a wide variety of industries to your problem. This project demonstrates that diversity by taking a common power plant effluent and determining an uncommon, cost-effective solution.

Using innovative technology, we're here to guide you, one successful solution at a time.

A handwritten signature in black ink that reads "Rick Halil".
